

Title here

Some author

- The audience sees the slides, but you see your notes.
- Or, if your don't have notes, you can use mirror mode.

One frame

Another Slide

- ▶ Here is another slide.
- ▶ This one doesn't have a note.
- ▶ Slides without a note, are always shown on both displays.

Some text included only in the article mode.

Slides vs. Notes

Your slides can be in one of three modes:

- ▶ Just slides, no notes
- ▶ Slides and notes interleaved
- ▶ Superwide pages: slides and notes side-by-side

- Just slides, no notes
- Slides and notes interleaved
- Superwide pages: slides and notes side-by-side

- Just slides, no notes
 - For presentations without any notes
- Slides and notes interleaved
 - BEAMER's .nav file is used to determine if a particular page is a slide or a note.
 - The .nav file can be either embedded into the PDF (like it is in this one) or next to it in the same directory
- Superwide pages: slides and notes side-by-side
 - For this mode, include the `pgfpages` package and change the BEAMER option “show notes” to “show notes on second screen”.
