

**NAME**

hunzip – compress and encrypt dictionary files

**SYNOPSIS**

hzip [-h] [-P password] [file(s)]

**DESCRIPTION**

*hunzip* is a small utility for text file compression and encryption, especially for sorted dictionaries. "hunspell filename" creates the compressed file "filename.hz" without removing the original file.

The compression algorithm uses 16-bit Huffman encoding and line-oriented prefix-suffix compression. It has good compression ratio for huge sorted word lists.

**OPTIONS**

- h**      Display short help description.
- P**      Encrypted compression by an arbitrary length password.

**SEE ALSO**

**hzip (1), hunspell(1)**
